

xPins requirement :

Tuong,

xPins is a product which I downloaded from another company. We did not develop this product.

But I want to make some modifications in the code, add some features and then Re-brand it as xPins product.

The product which I downloaded is from here - <https://www.flippyscripts.com/flippy-linkshare-visual-link-sharing-websites-builder/>

Download zip here - https://www.dropbox.com/s/5k84qhe8p7isxti/flippy_linkshare_2.1.0.zip?dl=0

The script installation and requirement - inside the zip file.

Requirement -

- MySQL (Version 5 or higher).
- MySQLi extension.
- PHP (Min: version 5 or higher, Rec: version 5.3 or higher).
- Apache Mod_Rewrite Enabled.
- GD Image library.

Customization / Modifications to be made :

- 1) remove all references to the previous company (flippy share / flippy script) etc.
- 2) the front end - first page they have used "Fast page load using Pjax technology." - sometimes the images are messed up due to this and looks ugly. what's the better solution?
- 3) Show filters - <http://prntscr.com/haqml3>
- 4) Right now the product - when I click thumbnail image- it redirects to third party site. When I click the title of the post - it takes to image post. I want the thumbnail click > go to > image post. Not to redirect to third party site.
- 5) <http://prntscr.com/haqt5k> - all video posts are embedded from different sites. So from the backend - you need to allow this option. Admin can enter the embed URL from any site in the world - and it should be shown as embed video in the post.
- 6) In the backend - We need to have option to bulk upload images.
- 7) The images showing in the front end - need to show shuffled and random images. If user wants to see the recent uploaded images, he can filter by recent, popular.
- 8) As mentioned above - any video URL he gives - it needs to show in embed view in the video post page.
- 9) Keep the audio option as same in the script. No need for any modifications there.
- 10) Ad banners on the home page. On the script - have ad banner only in the Post page in sidebar. Need to have multiple ad banners on the homepage.
- 11) Need scrapers - when a URL is entered - it should pick the title and image and admin will categories to the post and when hit publish - the images will be scraped and ssaved to our server and post will be published.

Design changes -

This is the current demo of the product - <http://linkshare2.flippydemos.com/index.html>

The design needs to be changed. Some of my inputs

<http://prntscr.com/haqlns>

<http://prntscr.com/haqlxo> - when hovering mouse , remove this

<http://prntscr.com/haqm7t> - in this area - show categories - like this - <http://prntscr.com/haqmct>

<http://prntscr.com/haqq8m> - show this related post on the sidebar - here - <http://prntscr.com/haqqf0>

<http://prntscr.com/haqqpz> - move this block below and show only Categories, total views, and Found on (third party site link)

<http://prntscr.com/haqr40> - show this on the right sidebar - with a big icon - to Like and comment and share.

Design / CSS need to be tweaked to have color combination in the theme.

Design should not look like the Flippy scripts product. No one should be able to find out.

Step 1 - Install the flippy script product in a demo server.

Step 2 - Make a requirement document and share it with me - Ask questions

Step 3 - Finalize the requirement and estimate

Step 4 - Start development
